

Why and how GAVEL® can help you this season, seed crops only

Several factors of this growing season have the potential to lead to an increase in storage diseases and rots of seed crops.

- During the growing season, many crops suffered with tuber sprouting, including chain tuberisation. When harvested, the chits will inevitably be knocked off creating an entry point for fungal pathogens.
- The challenges around desiccation have allowed fungal pathogens to build on naturally (often variable) senescing crops.
- Skin set has been variable due to haulm secondary growth; development of grand-daughter tubers (from chain tuberisation) and uneven naturally senescing crops. This will allow easier entry for fungal pathogens.
- Soil temperatures are relatively high which favors fusarium dry rot.
- Where crops have been allowed to grow on harvest may be delayed due to the weather and, if conditions turn, can increase susceptibility to gangrene.

For optimum efficacy of GAVEL®:

- GAVEL® controls key storage diseases:
 - Gangrene
 - Silver scurf
 - Fusarium dry rot
 - Skin spot
- Apply at 150 ml/tonne in a total maximum solution of 2 litres water/tonne
- GAVEL® is a protectant therefore treat on store loading
- Apply to tubers passing over a roller table, using canopied, hydraulic or spinning disc equipment
- For best results, use a canopy applicator with rotating arm nozzles (eg TEAM CTC 2 air treatment canopy)
- Treated seed **must not** be fed to livestock or go for human consumption

USE PLANT PROTECTION PRODUCTS SAFELY. ALWAYS READ THE PRODUCT LABEL AND PRODUCT INFORMATION BEFORE USE.

For further information with regard to warning phrases and symbols for this product, please refer to the product label. Gavel® contains Imazalil. MAPP No. 17566 PCS No. 05089 Gavel® is a registered trademark of Certis Europe BV. Team CTC 2 air treatment canopy is a product of Team Sprayers Ltd.
