

InSyst® - Effective Control of Key Aphids in Potatoes

- Rapid knockdown
- Control of peach potato aphid and potato aphid
- Translaminar and systemic mode of action
- Targets aphids in two ways; contact and ingestion
- Long persistence control up to 3 weeks after application

Rapid control with InSyst®

InSyst® offers reassuring persistence

Guidelines for Use

Resistance management:

- Use full label rate
- Respect maximum number of applications
- Use when aphid infestation starts
- Alternate insecticides with different modes of action

Thresholds

- Ware potatoes: > 5 aphids/leaf and on whole crop from top, middle and lower leaves
- Seed crops: first seen in crop with warning from local advisory service

Active Substance	Acetamiprid 20%		
Formulation	Quick dissolving water soluble powder		
Crops	Potato (seed, ware)		
Max application rate	250g/ha	Harvest Interval	14 days
No. of applications	2 (seed) 1 (ware)	Reg no.	MAPP 13414 (UK) PCS 03249 (IRE)
Pack	1 kg	LERAP	Category B
