

# NISSORUN®

A new acaricide for the control of two spotted spider mite and red spider mite

- New to the UK, active substance **hexythiazox** is a growth inhibitor.
- Effective translaminar activity, both contact and stomach action.
- Works by inhibiting chitin synthesis during the early stages of the life-cycle.
- Excellent activity on egg and larvae stages - timing is key to provide season-long protection.
- Supports IPM programmes with excellent safety to macro biologicals.

## Best Practice Application

- For most effective results, monitoring and planning is essential.
- Target mite egg/young stages - with correct timing, Nissorun is very effective at disrupting mite life cycle.
- Use the max concentration per crop.
- Fill spray tank with 2/3 water and agitate prior to adding Nissorun.
- Ensure robust microbiological programme or add a tank mixing partner with knockdown effect.
- Apply sufficient water to achieve optimum wetting on both the top and bottom of leaves.
- A wetting agent can be added to reduce visible residues.

<b>Formulation</b>	Suspension concentrate (SC) containing hexythiazox (250g/l)		
<b>Chemical Class</b>	IRAC Code Listing: 10A		
<b>Crops</b>	<ul style="list-style-type: none"> <li>• Apples, Pears, Hops - (aquatic buffer zones apply)</li> <li>• Aubergine, courgette and Summer Squash, Cucumber, Melon, Pepper and Chilli, Tomato, Watermelon, Winter Squash and Pumpkin (Permanent Protection)</li> </ul>		
<b>No. of application</b>	One application per year. Use in a full pest programme when mites first seen.		
<b>Rate of use</b>	0.32, 0.39 or 0.6 L/ha – crop dependent. Maximum concentration 27 - 85 ml/100 L		
<b>Coverage (L/ha)</b>	500 - 3,300L depending on crop use	<b>Harvest Period</b>	3 or 28 days (outdoor or indoor crops)
<b>Rainfast Period</b>	Allow time to dry on surface and for mites to feed – ideally one day period	<b>MAPP no.</b>	19263

USE PLANT PROTECTION PRODUCTS SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
