

Setanta Flo®

- A residual herbicide
- For the control of a range of common weeds, including blackgrass in a range of crops
- Grass and broad-leaved herbicide for use in a wide range of crops
- The active, propyzamide, has become an invaluable tool in the control of blackgrass in oilseed rape

Users should take care to avoid contaminating watercourses during and after application. Further guidance can be found in the HGCA factsheet no. 09/2009 "Oilseed rape herbicides and water protection"
